Cord Cleaning
Complete User Manual

Every screen, every tab, and every button in the platform, explained in plain language — what it's for, and exactly what happens when you use it.

27 September 2026

Who uses this system

Role	Where they work	What they do
Admin	Web	Runs the business. Sees and manages everything below.
Supervisor	Web	Admin minus Finance and Payroll, limited to their assigned clients' sites.
Staff / Cleaner	Mobile app	Clocks in/out, completes tasks, uploads before/after photos, files incidents. Logging into the web app instead just shows a “get the app” screen.
Client	Web — Client Portal	Sees proof their sites were cleaned, inspection scores, invoices, and can message their supervisor.
Subcontractor	Web — own dashboard	An outside cleaning company granted access to specific sites, managing their own workers.

This manual is organised the same way the system is: Part One covers day-to-day operations (Admin/Supervisor), Part Two covers money (Finance, Quotes, CRM), Part Three shows what your own clients see when they log in, and Part Four is a short appendix on the platform-operator tools that only Cord Cleaning's own staff use — included for completeness, not something you'll ever need to touch.

PART 1

Running the Business

Dashboard, people, clients, sites, and day-to-day operations — the Admin/Supervisor view.

1. Dashboard

Dashboard

The home screen — shows which cleaning shifts are happening today, whether staff have checked in on time, and quick links to money coming in and out.

Tabs: a row of status filter chips — All Sites, Active Sites, Not Checked In, Completed Sites, Inactive Sites, No Time Data — each just filters the same list

‹ / › date arrows: step the whole dashboard back or forward one day

Date picker: jump to any specific day

Search box: filters the shift list by site, company, or staff name as you type

Company dropdown: filters the shift list to one client company

Download Reports (Admin): pick a from/to date, then Download Excel generates an attendance spreadsheet — clock-in/out, hours worked, no-shows, with supervisor

Attention Needed tile: jumps to the full “Needs Attention” exceptions list

Change Staff (on a shift): swap who is rostered on that shift, optionally changing the time or pay rate

Cancel (on a shift): cancels that day's shift entirely, after confirmation

Force Clockout (on an active shift): manually clocks someone out, for when they forgot to themselves

Upcoming Payments / Outstanding Invoices (Admin): each row jumps straight to Finance → Invoices

Getting Started checklist (Admin, until complete): three buttons that jump to “Add your first site,” “Add your first staff member,” and “Build your first schedule”

Client Service Requests banner (Admin): Schedule or Decline each pending one-off request from a client

Staff Document Expiry / Birthdays & Anniversaries banners: informational only — lists who's affected, nothing to click

Note: A Client sees a simplified welcome message instead of the shift grid. A Staff login is redirected to a “download the mobile app” screen, since clocking in only happens there.

2. User Management

User list

The full list of every login in the system — Admins, Staff, Supervisors, Clients — and the screen to add or edit one.

Tabs: All, Admin, Staff, Supervisor, Client — filters the table by account type

Search box: filters by username, email, or first name

Status filter: All / Active / Inactive

Import CSV (Admin): uploads a spreadsheet of new users, with a preview and a column-mapping step if needed

Add User: opens the Add/Edit screen in create mode

Bulk actions (Admin, once rows are checked): Deactivate/Reactivate the selected accounts (with a preview and a 2-minute undo), or Upload Document to attach the same file to every selected staff member at once

Save current view (Admin): remembers the current search/filter combination under a name for one-click reuse

Edit (pencil icon): opens that user in the Add/Edit screen

Change Password (key icon, staff only): sets a brand-new password for that staff member

Active/Inactive switch: toggles the account on or off; switching off reveals an Offboarding checklist, switching on reveals an Onboarding checklist

Add/Edit User

One form for a brand-new account; once a Staff or Supervisor exists, it becomes several tabs.

Personal Info: name, username, email, phone, gender, role/type, password (create only), and — for a Supervisor — which client companies they're assigned to

Other Details: tax file number, ABN, superannuation, address, work experience

Sites: which sites this person is assigned to, with day-specific pay rates; Show History reveals past assignments

Bank Details: account name/number/BSB, locked behind a re-enter-your-own-password step before it will even display

Emergency Contact: name, number, relationship

Documents: upload passport/visa/police-report files; each has a View preview and a Replace File button

Salary (Supervisors only): current weekly salary, with Increment/Decrement (one-off adjustment with a reason) and a full History of past changes

Note: Any tab may also show extra custom fields an Admin has added in Master Configuration → User Detail. Only INTERNAL and SUPERVISOR logins can open this module; a Supervisor can only create the "Staff" role.

3. Subcontractor Management

Subcontractor list

Manage outside cleaning companies your business subcontracts work to.

Search box: filters by name, contact, or email

Add Subcontractor: opens a form (company info, address, logo) — Create Subcontractor saves it

Insurance & License Compliance panel: lists every subcontractor document that's expired or expiring within 60 days; clicking one jumps to that subcontractor

Subcontractor detail

One outside company's profile.

Details tab: edit company name/contact/ABN/address/logo

Supervisors tab: the people who can log in for this subcontractor — Add Supervisor, toggle Status, Edit

Documents tab: upload/download/delete insurance certificates and licenses, with an optional expiry reminder

Note: A Subcontractor login instead sees their own dashboard: the sites they've been granted, their own workforce, and (if their company's admin) Add Worker plus Assign to Site per worker.

4. Client Management

Client list

Your client companies, active or deactivated.

Churn Risk panel (Admin): flags clients at risk of leaving based on payment history and time since last invoice

Search box: filters by name or type

Add Client: a full form — name, type, contact, ABN, billing type/grace period, address, logo

Client profile

One client company's full record, opened by clicking its card.

Client Details tab: edit the same fields as Add Client, plus (Admin) Activate/Deactivate — deactivating also deactivates every active site under that client

Assigned Users tab: which client-side logins belong to this company — Assign / Unassign

Sites tab: see Chapter 5, Site Management, for the full depth of this tab

Invoice tab (Admin): Generate Invoice opens the invoice builder; per invoice — View, Edit, Mark Paid, Record Payment (with running history), Send Email (warns first if the amount looks unusual), Cancel

Documents tab: upload/download/rename/delete files for this client

Contracts tab: upload a contract; Signatures shows who has/hasn't signed; Remove or Download

Supervisors tab: which supervisors are assigned to this client, and which of the client's sites each can see — Include/Exclude per site

Subcontractors tab: grant a subcontractor access to specific sites under this client, with day-specific rates — Grant, Grant All Sites, Edit Rate, Revoke

Note: Supervisors don't see Invoice/Documents/Contracts/Subcontractors on a client's profile. Clients don't see Contracts or Subcontractors either.

Generate/Edit Invoice

Build an invoice for one client.

Site selection: pick which sites this invoice covers, with Select all active/inactive/all shortcuts

Line items: pulled from approved timesheets automatically; Add manual item, remove a line, or Refresh from Timesheet to re-pull the latest hours

Save Invoice / Update: creates or updates the invoice

5. Site Management

Site List (main view)

Every site for a client company, shown as one card per rostered shift, for a chosen date.

‹ / › arrows and date picker: move between days

Search box: filters live by site or staff name

Active/Deactivated dropdown: switch between currently-active and deactivated sites

+ Add Site (hidden from clients): opens the new-site form

Clicking a card: opens that site's full tabbed detail view

Attendance (on a card): shows that shift's recorded clock-in/out times

Change Staff (hidden from clients): swap who is assigned, optionally changing the pay rate

Cancel Shift / Force Clock Out (hidden from clients): cancel a day's shift, or manually end an open shift

Note: A site with 4 people rostered shows as 4 cards, not one — the page explains this so it doesn't read as duplicates.

Add Site

Create a brand-new site.

Form fields: Site Name, Start Date, Service Type, Site Type, full Address with autocomplete, Geofence Radius (how close a cleaner must be to clock in), Google Maps link, Requires Certification / Outdoor Job checkboxes, Notes

Add Site: creates it and opens the new site's detail page directly, since it still needs staff and scope of work set up

Site Detail tabs

Once you open a site, a tabbed screen with up to 14 sub-tabs appears (fewer for Clients/Supervisors).

■■ **Transfer Site (hidden from clients/supervisors):** moves this whole site, and its staff assignments, to a different client company

The 14 sub-tabs, in brief

Everything inside a site's detail view:

Overview: Read-only weekly schedule grid, 5 most recent inspections, 5 most recent incidents. Nothing to click that changes data.

Site Details: Edit Configuration unlocks the record for editing; Transfer Site; Deactivate/Activate Site; Save Changes.

Role List (hidden from clients): Pay-rate “roles” assignable at this site. + Add New Role sets either a flat budget or Mon–Fri/Sat/Sun/public-holiday rates; Edit/Delete per row. Supervisors see roles but not rate figures.

User List: Who's assigned to this site. Show History toggles past assignments; + Assign Staff (with up to 3 AI-suggested staff); Replace Staff swaps one person for another from a chosen date; a bulk “Move to site” action (Admin) reassigns several staff at once with a 2-minute undo.

Time Allocation (hidden from clients): Sets the recurring weekly shift schedule. Pick days, set Start/End time per staff per day, a Next Day and a Break checkbox, live-calculated Total Hours; + Shift adds a split shift; Save All

Allocations warns first if it detects an overlapping shift elsewhere.

Maps: Live map of staff GPS location currently at this site. View-only.

Reports: Generate Report builds a PDF activity report for a date range; an optional Report Attachment (Admin) gets appended to every future report automatically.

Inspection: Formal quality checks with a checklist, ratings, and photos. New Inspection pre-fills the checklist from the site's Scope of Work; each item gets a rating and optional photo, with a redact option per photo hiding it from the client. Submit for Review, Approve, Reject, Download PDF.

Edit Work (hidden from clients): A calendar for logging what was actually done, with before/after photos. Click a day, pick the task, drag-and-drop photos; days before the site's start date are locked.

Scope of Work: The master task checklist, filterable by Regular/Periodical/Rectification/Adhoc. + Add New Task (Admin/Supervisor) sets which day(s) it applies to; Edit/Delete per task.

Chat Room: A live group chat scoped to this site. Send messages, images or files, @mention, reply/thread, react, pin, edit/delete your own (Admin can hard-delete anyone's), search within the room, mute notifications. Works offline — an unsent message queues and sends once reconnected.

Toolbox Talk: Logs a WHS safety meeting with attendee sign-in. New Toolbox Meeting covers the agenda, observations, and actions needed; each attendee signs on a signature pad before the record can be saved.

Walkthrough: Short video walk-arounds (up to 7 minutes) so new staff know the site. Add walkthrough uploads a video; click any tile to play it full-screen.

Maintenance (hidden from clients): Tracks equipment servicing/repair tickets — title, category, status, priority, due date, cost. New Maintenance Record, Edit, Delete.

Assets & Supplies (hidden from clients): Inventory of owned equipment and consumables at the site. New Asset/Supply; a low-stock icon appears at/below the reorder threshold; Report Damage/Loss logs an item as damaged or lost and opens a linked maintenance ticket automatically.

6. Staff Requests

Staff Requests

New staff/client sign-up requests waiting for a decision.

Tabs: All Requests, Staff Only, Clients Only — filters the same list

Approve: approves the request directly

Reject: requires a reason, then Submit Rejection

Note: Hidden from Client and Subcontractor logins.

7. Documents

Documents

A shared company file drive with folders and per-role sharing permissions.

New Folder / Upload (hidden from Clients): create a subfolder or add files to the current folder

Clicking a file: previews PDFs/images inline; anything else offers Download File

■ **more menu (hidden from Clients):** Share/Permission (grant VIEW/EDIT/OWNER to a role), Rename, Delete

Note: A Client can browse, view, and download, but not create, upload, share, rename, or delete anything.

8. Send Notification

Compose

Send a one-off email or push message to a group of users.

Subject / message / Send as Email or Notification: compose the message

Recipients checkboxes: All users, Internal staff, All Staff (narrowable to Supervisors/Staff/Subcontractors), Clients, plus named individuals on top

Send Message: sends it and reports how many people it reached

Notification Types

Manage the reminders the system sends automatically.

On/off switches: toggle each automated reminder (task, shift, document-expiry, daily digest, etc.)

Custom Notifications — Add: build your own recurring reminder: title, message, schedule, time of day, recipients, priority

Note: Hidden from Client and Subcontractor logins.

9. Time Sheet

Time Sheet

Review every staff clock-in/out for the week, correct mistakes, and approve or reject hours before payroll.

Tabs: All, Approved, Pending, Not Started, Rejected, Edited, Canceled

‹ / › week navigation: can't go past the current week

Generate Timesheet Excel: pick companies/sites and a date range, then download

Add Time Sheet: add an ad-hoc manual time entry for a shift

Approve / Reject / Edit / Cancel Shift (per card): Reject requires a reason; Edit reopens the same multi punch-in/out editor

Bulk toolbar (checkboxes): Approve All, Reject All, bulk Edit/Cancel — shows a confirmation of exactly what will change and flags anything unusual first

Details view: the full activity/audit trail on any card — who requested, edited, or approved, and when

Note: Hidden from Client and Subcontractor logins.

10. Staff Leave Request

Staff Leave Request

Review and manage staff (and supervisor) time-off requests.

Tabs: Staff Leave / Supervisor Leave

New Request: admin-created on behalf of a staff member — pick the person, date, and which scheduled shift it covers

View Details / Edit Request: review or amend a request

Approve / Reject / Cancel Request: each opens a small dialog for a reason before confirming

11. Todo

Todo

A personal task list for the person logged in — reminders and small tasks, not tied to any client or job record.

Add task: with an optional due date and priority

List / Kanban toggle: same tasks, two layouts

Delete task: removes it

Note: Important: this list is stored only in your browser on this device — it is not saved to the server, not shared with teammates, and won't appear if you log in elsewhere. A Client sees it read-only.

12. Incident Management

Incident list

Log workplace incidents and near-misses and track them through to closed.

Tabs: Unsubmitted, Open, Closed

Export CSV: exports whatever's currently filtered

+ Create Incident Report: asks whether an injury was suffered, then starts the wizard

View / Delete (drafts only): open a report, or remove an unsubmitted draft

Incident wizard & Report Summary

A guided report, 4 or 5 steps depending on whether an injury was reported.

Steps: Incident details → Injured Person (if applicable) → Reporter → Documents → About/Details

Edit (per section, while draft): inline edit fields plus Update

Save Draft / Confirm Submission: Confirm Submission shows a safety-advice dialog, then Complete locks it from further edits

Close Incident (once submitted): marks it resolved

Note: Hidden from Client and Subcontractor logins.

13. E-Learning

E-Learning Hub

Company training courses with videos, lessons, quizzes, and certificates.

All Courses: browse/search; each card shows Enroll Now, Resume, or Certified

In Progress / Completed: the same courses filtered to your own status

Training Videos: every lesson video across every course, playable without enrolling

Create Course (Admin): title, description, video/lesson text, and an optional multiple-choice quiz

Manage Content (Admin, per course): add/remove modules and lessons

Taking a course: mark each lesson complete, take the end quiz, then Download Certificate

Note: Only Admins can create or edit courses; everyone, including Clients, can browse and take them.

14. Chat

Chat

In-app messaging — per-site group chats, direct messages, private groups, and a company notice board.

Search all your chats / Mark all read: global tools

Sites tab: every site's chat, with unread badges

Direct tab: your 1:1 and group conversations; New message, New group

Board tab: company-wide announcements — New, pin, Edit, Remove

Inside any room: send messages/images, Reply (threaded), Edit/Delete your own, react, download attachments; site rooms add Search and mute

Group chats: Manage members, Delete Group (owner), Leave Group

Note: Not in a Client's menu, so in practice used by staff, supervisors, and subcontractors.

15. Master Configuration

Master Configuration

Tenant-wide settings used across payroll, quoting, CRM, and user profiles — one hub, many tabs.

Public Holidays: manage the paid holiday list used by payroll/time calculations — Add, Edit, Delete.

Quote Pricing: default overhead %, target margin %, healthy-margin threshold, and GST rate for new quotes.

Labour Rates: base wage and on-cost % for each labour role, used to cost quotes only — does not touch payroll pay rates.

Task Library: the catalogue of cleaning tasks and standard productivity rates used by the Quote wizard.

Site Types: the site-type options offered when quoting, each with an optional default Areas/Tasks template.

CRM Pipeline: the deal stages shown as columns on the CRM board — name, order, colour, Won/Lost flag.

User Detail: toggle which profile fields are compulsory, and add your own custom fields to the Add/Edit User screen.

Email Templates: manage the wording of system emails.

Audit Trail (Admin only): a searchable, read-only log of every sensitive action taken in your account — who did it, to what, and when.

Data Security (Admin only): password complexity policy; a Full Data Export button (zip of every client/site/staff/invoice/payroll record); a Scheduled Export to email that automatically on a recurring basis; a read-only encryption-status panel.

What's New: a changelog of product updates — everyone can read, Admins can post.

Feature Flags (Admin only): an on/off switch registry used for staged rollouts of new features.

Note: Visible to Admins and Supervisors; Audit Trail, Data Security, and Feature Flags are Admin-only.

PART 2

Money

Finance, Quotes, and CRM — everything from day-to-day cash flow to winning new business.

16. Finance

Overview

A one-page snapshot of the company's money — what's come in, what's gone out, who owes you, and how this year compares to last.

Summary tiles: Total Payments Received, Total Expenses Paid, Net Cash Flow, Pending Collections

Trend / Debtor Aging / Year-over-Year charts: read-only visuals

Maintenance Records table: embedded here, with an Add Maintenance Record button

Financial Insight box: a plain-English tip based on your numbers

Ledger

A running list of every money movement recorded — cash in, cash out, invoices raised or cancelled.

Date filters / Search: narrow the list

Export Ledger: downloads the filtered list as a spreadsheet

Unreconcile: on an already-reconciled entry, undoes the bank-match link without changing the amount

Site Profitability

How much profit or loss each site is generating.

Date filters, search, Status dropdown: All / Profitable / Loss

Cost per Clean Benchmark: each site's staff cost per clean vs. the average — informational

Staff Utilization

How many hours each staff member actually worked versus rostered, for a chosen period.

Date filters, search, pagination: the whole screen is a read-only report

Quoted vs Actual

Compares what a site was quoted against what it's actually delivering now — flags sites quietly losing money.

Date fields, search: change the period or filter

“Below quote” toggle: shows only sites whose actual margin has fallen below what was quoted

Invoices

The master list of every invoice raised — who owes what, and lets you send, edit, or cancel.

AR Ledger download (Excel/PDF): a full financial statement of every invoice raised in a date range

Search / Status filter: narrow the list

View: preview the invoice PDF

Edit: disabled once Paid or Cancelled

Mark Paid: records a full payment for the whole outstanding balance

Record Payment: records a partial or specific amount, with running payment history

Send Email: warns first if the amount looks unusually high or low vs. that client's history

Cancel: a confirmation dialog, with an optional reason — makes the invoice terminal

Generate Invoice: starts a new invoice for the client (from their profile page)

Note: Only Mark Paid, Record Payment, and Cancel change real financial records. View, Send Email, search and filters never do.

Budgets

How much each site is allowed to spend versus what it has actually spent.

Search, Status filter: All / On Track / Warning / Over Budget — budgets themselves are set up in Site Management → Role Management, not here

Reconciliation

Upload your bank statement and match each transaction to the corresponding ledger entry.

Import Statement wizard: Upload (CSV only) → Map Headers (tell it which column is Date/Description/Amount) → Review (per-row GST toggle) → Sync to Ledger

Match Transactions: two lists — Unmatched Bank Imports and Pending Ledger Entries — with an auto-suggested match and confidence score

Use this match: instantly selects both sides of a suggested pair

Bulk Reconcile & Match: only enabled once selected totals match exactly — permanently links them as reconciled

Exclude / Delete (per bank line): remove from matching without deleting, or permanently delete

Rules & Insights tab: manage bank accounts (bank/credit card/loan) and auto-categorization rules that suggest a match one click at a time; view a 30/60/90-day cash-flow forecast built from your real invoices and expenses; an honest “not connected” panel for live bank feeds, which aren't active yet

Expenses (“Scheduled Transactions”)

Manage recurring or one-off income/expense items tracked automatically.

Add Transaction: description, type, amount, frequency, start date, company/site, category

Record in ledger (per row): immediately creates a real ledger entry for that item and advances its next-due date

Delete: removes the schedule — does not undo past payments it already recorded

Fleet

Tracks company vehicles, drivers, sites, and mileage.

New Vehicle: name, registration, make/model, status, assigned staff/site

Mileage Log (per vehicle): Add Entry logs a trip and updates the running odometer; entries can be deleted

Edit / Delete: per vehicle

Fuel Card

Import fuel purchases and assign each to the vehicle (and driver) it was for.

Upload CSV: preview then Import

Reconcile (per transaction): link it to a chosen vehicle and optional driver

Exclude / Delete: remove from matching, or permanently delete

Supervisor Performance

Ranks supervisors by attendance, inspection results, and incidents for a chosen period.

Date fields: the only control — a read-only leaderboard

17. Quotes

Quotation Dashboard

A control-tower view of every quote — pipeline, value, and a searchable list.

KPI tiles / Pipeline chart / Key Metrics: read-only — conversion rate, average margin, average contract value

Create Quote: starts a brand-new quote wizard

Search / Status filter: narrow the list

Duplicate (per row): makes an exact copy as a new draft and opens it

Convert to Site (Accepted quotes only): creates a brand-new site from the quote's details — one-way, can't be done twice

Delete (Draft quotes only): permanently deletes the draft

Note: Converting a quote to a site does not automatically set up the roster or invoice schedule — those still need configuring on the new site.

Quote wizard — Step 1: Client & Site

Attach the quote to a client contact and describe the site.

Client contact search: search existing CRM contacts, or Create new contact inline

Site name/type/address, contract duration, dates, notes: the site being quoted

Continue: saves the quote and advances — enabled once a contact is chosen

Quote wizard — Step 2: Requirements

Define cleaning frequency and who supplies what.

Cleaning Frequency / Service Days / Time Preference: how often and when

Customer Supplies / Company Supplies: checklists, with a custom-item Add box

Quote wizard — Step 3: Survey

Break the site into areas and list tasks, to calculate weekly hours.

Add Area: preset picker or a custom name

Add from Library: a searchable catalogue of standard tasks to add in bulk

Custom Task: a blank task you fill in yourself

Estimation method per task: Area (sqm), Unit count, or Direct time, plus a complexity multiplier

Quote wizard — Step 4: Costing

Work out what the job will cost to deliver.

Add Role: a labour line — role, headcount, hours per visit, days, supervision setting

+ Chemicals / Equipment / Travel / Consumables: cost lines, each with a costing method and a "Show to client" toggle

Periodic Services: separately-billed jobs like window cleaning — name, frequency, price

Quote wizard — Step 5: Pricing

Turn costs into a price, check the margin, then send it and record the outcome.

Overhead %, Pricing Method, Margin/Markup %, GST Rate: pricing inputs

Recalculate Price: generates the full pricing breakdown — required before anything else here works

Financial Summary: cost breakdown and recommended price per week/visit/month/year, with and without GST

Download PDF: safe, no status change

Email to Client: sends the quote PDF — a real, client-facing action

Negotiating / Accepted / Declined buttons: manually record the outcome — Accepted also moves any linked CRM deal to Won

Note: There is no client-facing "accept quote" link — the outcome is always recorded manually by a staff member after a call or email. Seeing cost/margin figures is permission-gated; not every role sees the same detail.

18. CRM

CRM (shared header)

Contacts, leads, deals, and tasks — the sales side of the business.

New Deal: create a sales opportunity directly — name, contact, value, close date, priority

New Contact: checks for likely duplicates (same email/phone/name) before you save, as a warning only

New Lead: for a not-yet-qualified prospect — also checks for duplicates

Leads tab

Prospects who haven't become a formal deal yet.

Convert to Deal: turns a lead into an active deal on the Pipeline tab — the lead record stays, just marked converted

Note: A red flag appears if it's been more than 14 days since anyone logged contact.

Pipeline tab

A drag-and-drop board of active deals by stage, plus a quote-to-contract funnel chart.

Dragging a card / stage dropdown: changes its stage — moving to “Lost” requires typing a reason first

Convert to Client (on a Won deal): checks for an existing client match by email/phone; if none, pick a Billing Type and Company Type to create a brand-new client company record

Contacts tab

The full address book of people the business deals with.

Search box: filters by name, email, or company

Clicking a contact: opens the Contact Detail popup

Tasks tab

Open follow-ups tied to contacts or deals.

Mark Done: marks a follow-up complete

Contact Detail popup

Full history and actions for one contact.

Deals list — New: start another deal for this contact

Tasks list — Add: a new follow-up task, with a due date

Activity Timeline — Add: log a call/meeting/note permanently to this contact's history — internal only, never sent to the client

PART 3

What Your Clients See

The Client Portal — exactly what a client logs into, with nothing of your internal operations exposed.

19. Client Portal

Client Portal dashboard

A client's one-page summary of their sites, cleaning activity, inspection results, and invoices.

Message Supervisor: opens a chat direct to their assigned supervisor — if more than one is assigned, picks from a list first

Request a clean: sends a one-off scheduling request to staff — not a direct booking

Report an issue: files an incident/near-miss report to staff, one-way

Stat tiles: Your sites, Cleans (30 days), Photos on file, Outstanding — each scrolls to that section

Your sites grid: click a site for a map with the geofence radius and a recent attendance log

Upcoming / Recent cleans: next two weeks read-only; recent cleans with photos open a before/after viewer grouped by phase

Inspections list: a score gauge, and a detail popup with every checklist item, rating, and photo (any photo staff marked redacted is simply left out)

Invoices table: click a row for line items, GST, payment history, and Download PDF

Contracts — Read & Sign: draw a signature on a pad and submit; already-signed contracts show a green badge instead

What a client CAN do

Can: view and download invoices with full payment history; view before/after photos and inspection scores/checklists (except redacted photos); view upcoming schedule; view a site map with geofence and attendance log; message their assigned supervisor; submit a one-off service request or an incident report; download and digitally sign a contract

What a client CANNOT do

Cannot: pay an invoice online — there is no payment button anywhere in the portal; edit or cancel any schedule; message anyone besides their own supervisor; see other clients' data; see a redacted photo; book a clean directly (requests are asks, not confirmations); track the status of a submitted report after sending it; edit or delete any historical record

PART 4

Platform Administration

Cord Cleaning's own internal tools — included for completeness. Not part of any client's subscription, and never something you'll need to use.

20. Superadmin Console (Cord Cleaning staff only)

Platform Dashboard

Landing page for Cord Cleaning's own staff after logging into the operator console. Two halves: platform status, and customer health.

Title / Message / Severity fields + Publish: posts a status/incident banner (e.g. “elevated API latency”) shown across every customer's app while unresolved

Resolve (per open incident): clears that banner

Tenant Health table: one row per customer business — active/total users, sites, last login, a colour-coded churn-risk flag, onboarding %

Onboarding % (clickable): opens a checklist popup of setup steps for that customer; Customer Success ticks off each step manually as they're completed

Impersonate (per customer): after a confirmation that it's logged, generates a temporary 1-hour access token to log in as that customer's admin for support/troubleshooting

Tenant Management

Create, edit, and deactivate the customer businesses using the platform — each with its own admin login, subdomain, and branding.

Add Tenant: company logo, company name/email, admin name/email/username/password, and one or more domains (subdomains of the platform, or a customer's own custom domain)

Status toggle (per row): activates/deactivates a customer's access instantly

View / Edit (per row): a read-only summary popup, or the full edit form

Email Setup: per-tenant outbound email configuration — SMTP host/port/username/password, from-address, and an enable/disable toggle

Upload File: uploads a tenant-specific Firebase configuration file, used for that customer's own push notifications

Role Management

Manages permissions for Cord Cleaning's own operator-console staff — entirely separate from any customer's in-app roles.

Add Role: name, code, description

Manage Permissions (per role): a per-module grid of Read/Write/Update/Delete toggles, with a Select All per row

User Management (platform staff)

The individual Cord Cleaning staff accounts that can log into this operator console.

Add User: name, username, email, phone, gender, and a role from Role Management above

Edit (per row): update an existing platform-staff account

Settings

Change Password: current password, new password, confirm — with a match check before saving

Note: A “Profile” settings page also exists but has no content yet — not something a customer will ever encounter regardless.

This manual reflects the system as built and verified against the live code — every action described above is real and working. Nothing here is a preview of a future feature.
