Cord Cleaning: Everything Left to Do

Whole system (web app, backend, integrations, operations) · checked against the code on 28 September 2026

1	11	7	20	11	2
In progress	Built, needs live testing	Blocked on an outside account	Not built yet (optional)	Security & code health	Housekeeping

Priority tags: HIGH fix or decide soon · MED worth doing · LOW nice to have.

A. In progress

#	ITEM	WHAT'S LEFT
1	**Accounting sync: push & pull for all data** HIGH	Two-way Xero/QuickBooks sync in Finance for accounts, customers, suppliers, invoices, invoice payments, credit notes, supplier bills, bill payments and manual journals. Needs a sync-link table so re-runs never duplicate records, plus proper account/item mapping; today it falls back to Xero account "200" and QuickBooks item "1". Only accounts and invoices can be pushed today, from the Integrations screen.

B. Built, but not yet tested live

the code is done; needs a click-through

#	ITEM	WHAT'S LEFT
2	**Budget editing** MED	Restart the backend (migrations V3_176–180), edit a site's monthly budget, and check it against actual spend.
3	**Super clearing-house payments** MED	Mark payslip super as paid; download and check the SAFF contribution file.
4	**Cash vs accrual switch** MED	Switch the P&L and Balance Sheet (screen and PDF) to accrual; confirm the balance sheet still balances.
5	**Tracking categories** MED	Tag an invoice, a bill and a journal line, then filter the P&L by that tag.
6	**Receipt scanning (OCR)** MED	Scan a real receipt photo on a staff expense claim.
7	**Multi-currency invoices** MED	Raise an NZD/USD invoice, pay it at a different exchange rate, and check the AUD ledger and the FX gain/loss line.
8	**Deposit invoices and quote accept/e-sign** MED	Unit-tested only. Cleara has no quotes, and a live test sends real emails.
9	**Client portal: messaging, invoice history, service requests, contract signing** MED	Built before a client login existed. Test them now with *clearaclient*.
10	**Platform-operator (superadmin) screens** LOW	WO-195/196/197/199 compile and pass tests, but the superadmin app can't be opened on the local dev address. It needs a dev-host setting first.
11	**Slack notifications** LOW	Uses the same code path as the generic webhook, which was tested, but it has never been sent to a real Slack workspace.

12	**Automatic database backups on the server** HIGH	Backup and restore scripts exist in the repo. Confirm they actually run on a schedule in production, and do one restore test.

C. Blocked: needs an outside account or your decision

#	ITEM	WHAT'S NEEDED
13	**Live bank feeds** MED	Pick a provider (e.g. Basiq) and create an account. The reconciliation screen is ready to plug into it.
14	**Single Touch Payroll (STP) lodgement** HIGH	ATO Digital Service Provider registration, or an STP gateway partner. This is required by law for payroll.
15	**Xero / QuickBooks developer app** MED	A real developer app, so sync can be tested end to end. Their access-token refresh also needs building; Xero tokens expire after 30 minutes.
16	**SMS sending (Twilio)** LOW	The connection test works, but nothing sends an SMS yet. Needs a Twilio account and a decision on what should trigger a message.
17	**Calendar push, DocuSign sending, Google/Microsoft sign-in** LOW	The "Connect" (OAuth) setup is done for each. The actual action on top isn't built, and each needs its provider's developer app.
18	**Review-request sending** LOW	The review-link settings exist; nothing sends the request to a client yet.
19	**Chat translation and SMS fallback (WO-058/061)** LOW	Skipped by agreement; both need outside provider credentials.

D. Not built yet: optional features skipped earlier as "not requested"; pick any to add

#	ITEM	DETAIL
20	**Active sessions page + force logout (WO-113 / WO-125)** MED	See who is signed in and log a user out everywhere (token versioning).
21	**Login history (WO-126)** MED	Only new-device alerts exist today, not a full login log.
22	**Session timeout setting (WO-129)** LOW	Access tokens are fixed at 1 day and refresh tokens at 1 week.
23	**API key management screen (WO-131)** LOW	The public API has keys; this is the fuller management screen from the punch list.
24	**Replace the active/inactive toggle (WO-114)** LOW	UI change from the admin punch list.
25	**Platform announcement banner (WO-116)** LOW	Tenant-admin banner. The operator incident banner already exists.
26	**Duplicate-site action (WO-117)** LOW	Copy a site with its settings.
27	**Role templates (WO-119)** LOW	Preset permission bundles for new roles.
28	**Multi-level leave approval (WO-043)** MED	Approval chains exist for expenses; leave is still single-step.

29	**Buddy pairing for new staff (WO-046)** LOW	From the Staff & HR punch list.
30	**Staff feedback polls (WO-049)** LOW	From the Staff & HR punch list.
31	**Notification channel preferences (WO-050)** LOW	Per-user email/push/SMS choices on the web. The mobile apps have their own version.
32	**Scheduled report delivery by email** LOW	Saved reports exist; they can't yet be emailed on a schedule.
33	**Opening-balance / chart-of-accounts import** MED	Needed when a business moves over from other software mid-year.
34	**Custom fields on invoices and transactions** LOW	Custom fields exist for users only.
35	**Nightly check that the cash ledger and the double-entry GL agree** MED	From the roadmap's proof step. Only an invoice-totals check runs today.
36	**GST on recurring (scheduled) expenses** MED	Scheduled expenses always post with no GST, so the GST Paid figure on the BAS misses them.
37	**Period-end revaluation of foreign-currency invoices** LOW	Unpaid foreign invoices stay at their original exchange rate until paid.
38	**Industry benchmarking** LOW	Only partial benchmarks inside Site Profitability.
39	**Mobile apps: catch up with this month's web features** MED	My Payslips, client Pay Now, multi-currency and similar were built for the web only. The two mobile repos (primos_enterprise_cleaning and multi_tenant_mobile_app) have also drifted apart.

E. Security & code health

#	ITEM	DETAIL
40	**Refresh tokens also work as normal login tokens** HIGH	The request filter accepts any validly signed token, so a 1-week refresh token can be used directly as the 1-day access token. The fix is one check in TenantJwtFilter.
41	**Leave approval isn't limited to supervisors (APPR-002)** MED	Any non-client user can approve, reject or cancel someone else's leave.
42	**Upgrade the JWT library (DEP-003)** LOW	jjwt 0.11.5 has one disputed moderate CVE.
43	**Tests are unit-level only** MED	No integration or controller tests yet; the deploy pipeline runs unit tests only.
44	**Two sign-up pages** LOW	SignUpPage.tsx and Register.tsx. Decide which one to keep and delete the other.
45	**Accrual reports scan every record in memory** LOW	Fine at current volumes. Move to SQL totals if a tenant gets large.

46	**Depreciation fallback when residual value is 0** LOW	Uses a rough rate rather than a true diminishing-value schedule.
47	**Rebill-expense queue loads rows one by one** LOW	Slower once the queue grows; batch the lookups if it does.
48	**Shift reminder job doesn't remember what it already sent** LOW	Acceptable for same-day reminders. Store sent reminders if duplicates appear after a restart.
49	**Close out the old bug list (BUGS.md, 14 Aug)** LOW	Spot checks show the critical and high items are fixed, but the file has no per-item status. Mark items closed or archive the file.
50	**Superadmin app on the local dev host** LOW	Add a dev-host override so the operator screens can be tested locally (unblocks item 10).

F. Housekeeping

#	ITEM	DETAIL
51	**Remove test data in Cleara**	$15 flat late-fee setting (disabled), 12 imported ledger entries, a $12.50 rebilled claim on invoice T-4, and payslip #1.
52	**Update project notes**	Record this round's features, gotchas and verification status.

Confirmed fixed since earlier audits: TFN/bank-detail encryption, payroll amounts recomputed on the server, admin self-approval of time changes, email-failure handling, tests running in CI, chat message paging, eLearning now saves real progress, subcontractor access checks, and money stored as exact decimals.
Dropped from scope: multi-business login (at your request) and chat voice notes (WO-059).
