Cord Cleaning: What's Left

Everything still open from the Remaining Work list and the Full System Audit, after the fixes pushed on 28 September 2026. Numbers in brackets refer to those two reports (RW = Remaining Work, AU = Audit).

Need your decision	Not built yet (I can do)	Built, needs a live test	Blocked on an outside account	Code health & polish	Housekeeping

Priority: HIGH soon · MED worth doing · LOW nice to have.

A. Needs your decision

I can't start these without an answer

#	ITEM	THE QUESTION
1	**Replace the active/inactive toggle (RW 24, WO-114)** LOW	What should replace it? For example a status dropdown (Active / Suspended / Archived), or a confirm-dialog button like the one on the client page now.
2	**Mobile apps catch-up (RW 39)** MED	Which repo: **primos_enterprise_cleaning** or **multi_tenant_mobile_app** (they have drifted apart)? And which web features first: My Payslips, client Pay Now, multi-currency, leave approvals.
3	**Notification channel preferences (RW 31)** LOW	Which messages may a user switch off? Suggested: reminders, digests and announcements can be turned off per channel (email / push). Login codes, password resets, invoices and payslips always send.
4	**Staff self-service on the web (AU 30 & 40)** MED	Staff now have menu links to Availability, Expense Claims, Policy Library, Profile Updates and Payslips. They still can't **request leave** or **see their own timesheet** on the web (mobile only). Build a "My work" area with both?

B. Not built yet

ready for me to build

#	ITEM	DETAIL
5	**Accounting sync: push & pull all data (RW 1)** HIGH	Two-way Xero/QuickBooks sync for accounts, customers, suppliers, invoices, payments, credit notes, bills, bill payments and manual journals, with a link table so re-runs never duplicate. It can be built now, but testing it end to end needs item 28 (a developer app).
6	**Role templates (RW 27, WO-119)** LOW	Preset permission bundles (e.g. Supervisor, Accountant, Office admin) to start a new role from.
7	**Custom fields on invoices and transactions (RW 34)** LOW	Custom fields exist for users only.
8	**Period-end FX revaluation (RW 37)** LOW	Unpaid foreign-currency invoices stay at their original rate until paid.
9	**Industry benchmarking (RW 38)** LOW	Only partial benchmarks inside Site Profitability. Needs a source of industry figures.

10	**Scheduled report delivery by email (RW 32)** LOW	Saved report-builder templates can't be emailed on a schedule yet.
11	**Buddy pairing for new staff (RW 29, WO-046)** LOW	Pair a new starter with an experienced staff member for their first shifts.
12	**Staff feedback polls (RW 30, WO-049)** LOW	Short anonymous polls to staff with results for admins.
13	**Superadmin app on the local dev host (RW 50, AU 50)** LOW	A dev-host setting so the operator screens can be opened and tested locally (this unblocks item 23).
14	**Live badges over the websocket (AU 36 & 43)** MED	Header badges still poll every 30s (now paused while the tab is hidden). Pushing unread counts over the existing websocket would cut server load.
15	**Nightly smoke test (AU 45)** MED	Turn the audit's read-only crawler into an automatic check before each deploy.

C. Built, needs a live test

code done and unit-tested; needs a click-through that saves real data

#	ITEM	WHAT TO CHECK
16	**Budget editing (RW 2)** MED	Edit a site's monthly budget; check it against actual spend.
17	**Super clearing-house payments (RW 3)** MED	Mark payslip super as paid; download and check the SAFF file.
18	**Cash vs accrual switch (RW 4)** MED	P&L and Balance Sheet (screen and PDF) on accrual; balance sheet still balances.
19	**Tracking categories (RW 5)** MED	Tag an invoice, a bill and a journal line; filter the P&L by the tag.
20	**Receipt scanning / OCR (RW 6)** MED	Scan a real receipt photo on a staff expense claim.
21	**Multi-currency invoices (RW 7)** MED	Raise an NZD/USD invoice, pay at a different rate; check the AUD ledger and FX gain/loss.
22	**Deposit invoices, quote accept/e-sign; client messaging, service requests, contract signing (RW 8, 9)** MED	Test with the **clearaclient** login. Some steps send real emails, so they need your OK or a test inbox.
23	**Operator (superadmin) screens (RW 10)** LOW	Blocked locally until item 13 is done.
24	**Slack notifications (RW 11)** LOW	Send one to a real Slack workspace webhook.
25	**Production database backups (RW 12)** HIGH	Confirm the backup scripts actually run on a schedule on the server, and do one restore test.
26	**Review request, success path (RW 18)** LOW	Built this session; only the "not set up" refusal was tested. A real send emails the client, so use a test client email.

D. Blocked on an outside account

#	ITEM	WHAT'S NEEDED
27	**STP payroll lodgement (RW 14)** HIGH	ATO Digital Service Provider registration or an STP gateway partner. Required by law for payroll.
28	**Xero / QuickBooks developer app (RW 15)** MED	A real developer app to test sync (item 5) end to end. Access-token refresh also needs building; Xero tokens expire after 30 min.
29	**Live bank feeds (RW 13)** MED	Pick a provider (e.g. Basiq). The reconciliation screen is ready.
30	**Push notifications on the server (AU 11)** MED	Pushes fail locally ("Firebase service-account file not found"). Confirm each business's Firebase file exists on the live server.
31	**SMS sending via Twilio (RW 16)** LOW	Twilio account and a decision on what triggers a text.
32	**Calendar push, DocuSign, Google/Microsoft sign-in (RW 17)** LOW	OAuth "Connect" is done; each needs its provider's developer app before the actual action can be built.
33	**Chat translation and SMS fallback (RW 19)** LOW	Skipped by agreement; need provider credentials.
34	**Chat image attachments 404 (AU 12)** LOW	Files are missing on this dev machine. Confirm upload storage on the live server.

E. Code health & polish

#	ITEM	DETAIL
35	**Integration / end-to-end tests (RW 43, AU 34)** MED	Backend and frontend tests are unit-level only; nothing clicks through pages, which is how the Maps crash and invoice bugs slipped through.
36	**Slow screens (AU 37)** MED	Profile and index the slowest calls: HR reminders (35s), suggested staff (34s), site list (~11s), notice board (8s). Partly the remote dev DB.
37	**Full-screen loader (AU 38, 44)** LOW	Pages block the whole screen until every call returns. Loading placeholders would feel much faster.
38	**Small tap targets on phone (AU 28h, 48)** LOW	Icon buttons under 28px on Users, Edit Work calendar, Site User List, Notification Types, Time Sheet, etc. The overflow problems themselves are fixed.
39	**Google Maps deprecated Marker (AU 16)** LOW	Switch the client dashboard map to AdvancedMarkerElement before Google removes Marker.
40	**Tab buttons without type="button" (AU 17)** LOW	Harmless today; would submit a form if a tab bar sat inside one.
41	**Loose "any" types and lint (AU 33)** LOW	~870 any types (mostly api.ts / financeHooks.ts), 6 empty catch blocks in InspectionTab.tsx that hide errors.
42	**Browser tab title (AU 15, 49)** LOW	Shows "Primos Enterprise Admin" until the page loads. Use a neutral default. Also check Cleara's stored company name ("Center of Research and Development Pvt. Ltd.").

43	**Accrual reports scan every record in memory (RW 45)** LOW	Move to SQL totals if a tenant gets large.
44	**Depreciation fallback (RW 46)** LOW	Rough rate when residual value is 0, instead of a true diminishing-value schedule.
45	**Rebill-expense queue lookups (RW 47)** LOW	Loads rows one by one; batch if the queue grows.
46	**Shift reminder memory (RW 48)** LOW	Doesn't record what it sent; duplicates are possible after a restart.
47	**Close out BUGS.md (RW 49)** LOW	Mark the 14 Aug bug list items closed or archive the file.

F. Housekeeping

#	ITEM	DETAIL
48	**Remove test data in Cleara (RW 51)**	From earlier rounds: $15 flat late-fee setting (disabled), 12 imported ledger entries, a $12.50 rebilled claim on invoice T-4, payslip #1. From this round: scheduled expense "GST test cleaning supplies" ($110) and its pending ledger entry; opening-balance journal #16 (already reversed) and deactivated test accounts 1990 / 3900; cancelled test leave request #1. Also: Cleara's GST rate is set to 0%, so every GST split there shows $0.

Done this round all pushed to staging and tested in the app unless noted

- All 6 HIGH audit bugs: Site Maps crash, sidebar render loop, invoice currency/rate/tracking save, client Company Type blank, chat websocket tenant trust (now checked per channel), timesheet generate 500
- Pages calling the wrong role's data; client profile page; staff/client/admin menus (AU 7, 8, 29-32)
- Audit trail "null" text; duplicate row keys; dashboard onboarding card
- Every phone/tablet overflow in the audit (0px sideways scroll at 375 and 768)
- Header polling pauses while the tab is hidden
- Security Center: active sessions, sign out others, force logout, login history, session timeout, API keys (RW 20-23)
- Refresh tokens rejected as access tokens; leave decisions limited to supervisors; JWT library upgrade; duplicate sign-up page removed (RW 40-42, 44)
- Dunning job crash on lazy loading; client profile endpoint
- GST on recurring expenses (RW 36), plus a fix so the Ledger shows GST, tax, net and status (it never did)
- Nightly ledger-vs-GL check (RW 35)
- Duplicate Site (RW 26)
- Announcement banner from pinned notice-board posts (RW 25)
- Chart-of-accounts + opening-balance CSV import (RW 33)
- Multi-level leave approval, rule by hours of leave, different approver per level (RW 28)
- Review request email from the client page (RW 18; see item 26)

Dropped from scope earlier: multi-business login (your request) and chat voice notes (WO-059). Checked as not bugs: the subcontractor logo 404s and the browser-title brand are per-environment (files and website settings on this dev machine).
